

The Dosage Calculation course does not teach basic math skills. Basic math skills include:

- Addition
- Subtraction
- Multiplication
- Division
- Percentages
- Fractions
- Decimals
- Roman Numerals

Enclosed/attached is a worksheet with some basic math problems. You should be able to complete the worksheet without difficulty and without using a calculator. Please take some time to work out the problems on the worksheet. A key is provided to check your answers. If you find you are unable to correctly calculate the answers to these problems, we recommend you take a remedial math course to assist you in reviewing basic math skill.

Success in the Dosage Calculation course requires understanding and implementing basic math knowledge. We want you to be successful and recommend you evaluate your level of math skills prior to registering and paying for the Dosage Calculation course.
